

Cheques for Education

Designed to help protect against fraudulent alteration and duplication.

Secure Printed Cheques

Kalamazoo produces secure cheques for a number of major banks, as well as public and private sector organisations. Our secure printed cheques have been specifically designed to protect against fraud.

Cheque fraud is a major problem in the UK with the value of losses caused by fraudulent activity reaching tens of millions of pounds each year. The overwhelming majority of attempted cheque fraud is stopped before cheques are paid but the industry continues to concentrate efforts on identifying it through fraud prevention systems.

One way of protecting your organisation against cheque fraud is to use secure cheques. Our cheques far exceed Cheque & Credit Clearing Company (C&CCC) standards in order to help minimise the risk of fraudulent alteration and duplication.

Thousands of satisfied customers are testimony to the quality of our cheques; this is backed up by over 50 years experience as a leading cheque provider.

Our expert guidance will ensure that your customised cheques fully comply with C&CCC requirements and protect your organisation from the risks of fraud. Kalamazoo is a C&CCC accredited security printer and hologram applier, giving you complete peace of mind.

Security Features

CBS1 Watermarked Paper

The watermark and ultra violet dull paper cannot be easily replicated. Changes to a light brown colour when attacked by acids, alkalis, bleach or organic solvents.

Invisible Ultra Violet Ink

Under UV light, a previously invisible image will appear to identify an authentic cheque. This is created as an intricate fine line pattern for maximum protection.

Remittance Advice Protection

A distinct invisible UV ink pattern is used across the remittance portion of the cheque. This protects the remittance and ensures that any blank portion cannot be used to fraudulently reproduce cheques.

Micro Text

A minute font size is used which can only be viewed through a magnifying glass. If the cheque is copied, the text will blur, rendering it unrecognisable.

Copyvoid™

Kalamazoo's patented deterrent against photocopying shows the word VOID on a fraudulent copy.

Security Background Design/ Fugitive Panel

An intricate fine line pattern (guilloche) protects all critical areas of the cheque and enables easy detection of alteration to even a tiny portion of the cheque.

Security Inks

Aqua and solvent sensitive inks protect against attempted tampering using water and solvents. The inks smudge upon contact with these substances.
